

Guidelines

How to use the website:

1) This website needs to be populated starting from 'new anchor type', here you have to insert the anchor type name and if you want a small description.

2)The second step, need to populate the 'anchors stock', here you have to insert the name of the stock and the relative type chosen between the 'anchors type' inserted before.

3)Now it is possible to insert 'New Anchor', here you have to give a code anchor and a code stock chosen between the stock inserted before. After inserted the anchor, will asked to add a photo about the anchor if it is necessary.

4)Now you have to insert a 'New rods stock', here will be asked to insert a 'code rods stock' and other optional fields.

5)Now is possible to insert 'New Fiber', here you have to give a code fiber and the 'code anchor up' and 'code anchor down' chosen between the anchors inserted before. After the insert will be asked if you want add a log about the fiber if it is necessary.

6)Only after these steps, it is possible to add 'new mounting' and 'new test'.

7)For the new mounting will be asked to insert a code mounting and the 4 fibers chosen between the fibers inserted before. Note that is impossible to insert 2 or more fibers with the same code. After the inserted, will be asked to insert a log about that mounting if it is necessary.

8) For the test will be asked to insert a code test and insert a code fiber chosen by the fibers inserted before. As the fibers and mountings will be asked to insert a log about that test if it is necessary.

9) For Upload the anchor's photos is necessary have already inserted the relatives anchors, if not you won't be able to add the photos about that anchor.

10) The same speech about the upload file.

11) On the 'check data' will be showed a drop-down menu, you can choose to check the data that you want and will be showed a single table with all the data inserted before, here you can edit or delete the data. Upon every table there will be a small 'search form' where you can filter the table by the field showed. Is also possible to click on the column name and the table will be order by alphabetic order, or by date, etc.. .
